[4] Water (WR)

[4.4] Consumption of treated water

Description:

PDAM (Regional Supply Water Company) is the main supplier of clean water on the USU Campus. PDAM distributes clean water for the needs of buildings at USU such as departments, laboratories, student dormitories, sports buildings, academic centre bureaus, etc. There is an increase in the average use of clean water from 2021 to 2022 because in 2022 the new normal concept has begun to be implemented at USU after the pandemic. The need for water will increase in 2022 because, during face-to-face lectures, the health protocol for washing hands is still being applied at USU. Then in 2023, there is a slight decrease in the use of clean water, this can happen because the pandemic period has begun to end and because of hand washing to implement health protocols begins to decrease, in this case the use of clean water sourced from hygiene activities on campus for students, employees, and lecturers.
